

Customer Support Operational Performance & Refund Optimization

Analyzing customer support ticket operations
& Finding out the primary drivers for
customer dissatisfaction.

Presented by Divyam Raj

Business Problem

- Customer support operations are experiencing high ticket volume across multiple communication channels.
- This is leading to delayed resolution and increased customer friction.
- As a result, millions in revenue are being lost to product refund causing challenges to the company.

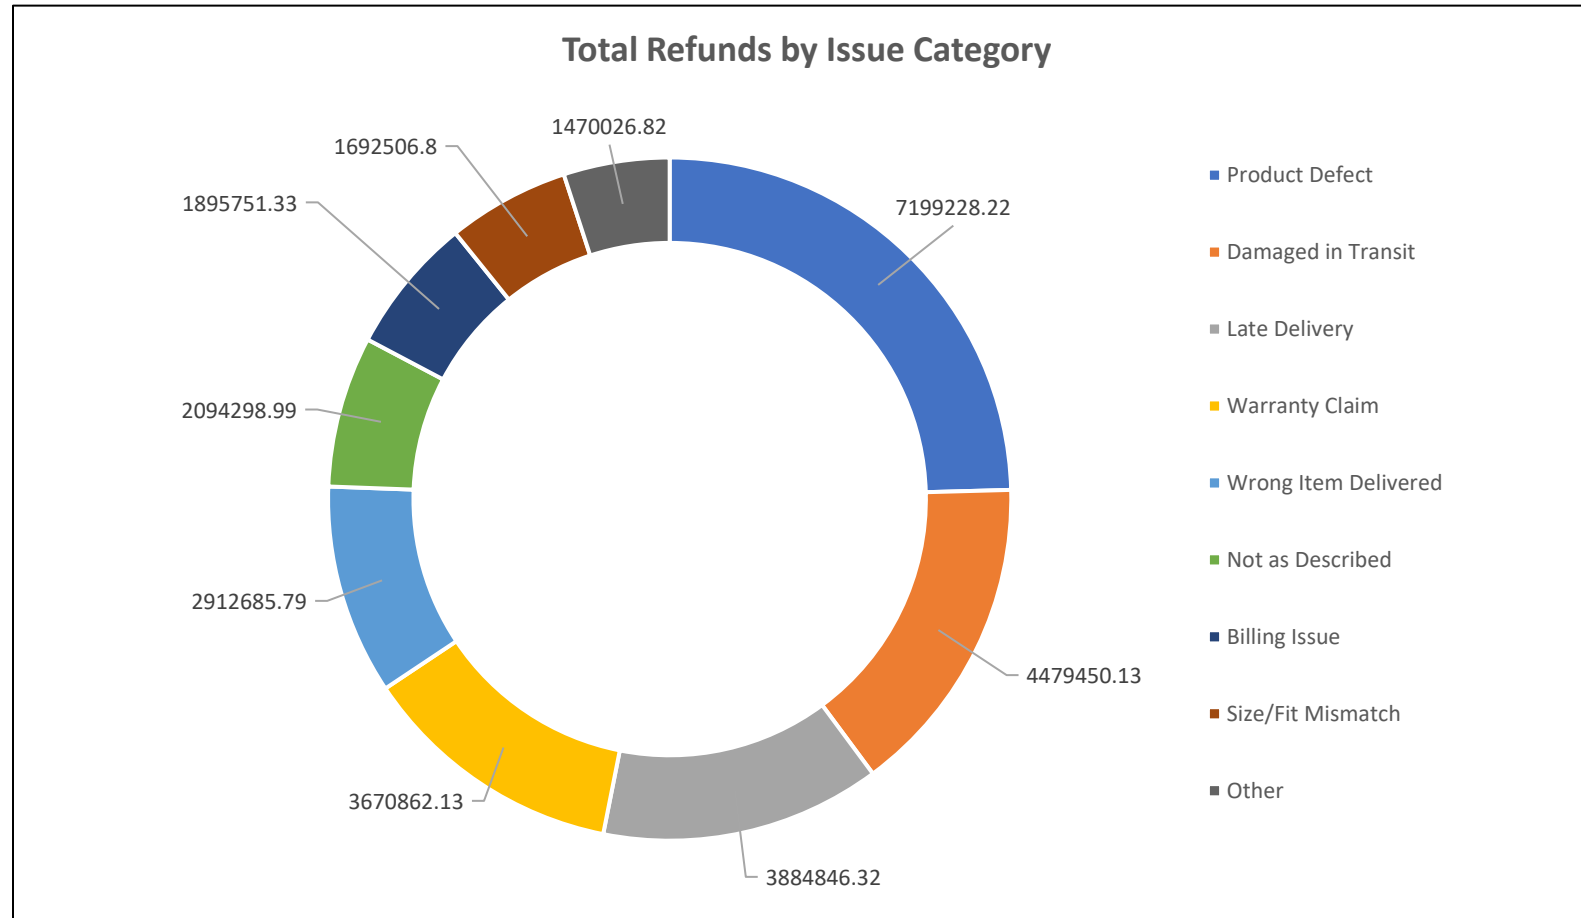

Key Goals

- Determine primary drivers for customer grievances.
- Optimize support operations.
- Measure financial Impact on revenue due to refunds
- Contrast high refund product lines against low refund items.
- Determine which channel have more traffic for tickets generation.

Key areas of analysis

- Customer behaviour analysis
- Root cause categorization
- Channel intake and volume
- Categorized refund analysis
